

Sprint Report #5

This report will cover the backlog items completed in Sprint 5, the current prototype's features, and client communication summaries.

0.0.1 Backlog Completed

- Implemented reporting interface.
- Implemented event report table.
- Implemented map interface.
- Implemented single event viewing.
- Implemented event image carousel.

0.0.2 Prototype Features

The following features were added to the prototype:

- Reporting interface in a separate page: The reporting interface will contain fields specific to the event set selected, in addition to a map for selecting the location of the event and a photo upload interface.
- Event report table on main page: The table contains event details specific to the event set selected and username for the person submitting the event, as well as links to view all details of the event on a separate page, and to center the map on that event marker.
- Event reports map on main page: The map contains markers for all events in the event set. Clicking on a marker on the map will popup a bubble with event details, specific to the event set selected, which can be clicked on to navigate to all event details.
- Single event viewing in a separate page: Clicking on the link icon associated with an event in the event table or on the event popup on the map will take the user to a separate page with all details regarding the event.
- Event image carousel on main page: The carousel will move through the first photo associated with each event set.

0.0.3 Sprint 6 Backlog

- Outstanding Documentation: prototype section for Sprint 5, design/testing section for login/register, design/testing section for set selection/list, design/testing section for set selection/list, start design section for report and map
- Finish Documentation: finish design/testing for report and map features, finalize sprint prototype and sprint report sections
- Final testing (and debugging)
- Design Fair preparation

0.0.4 Sprint 5 Successes/Issues

The sprint was an overall success. The prototype is essentially finished, no major changes should be needed. Documentation fell behind this sprint, additional effort will be put in between sprints 5 and 6 to catch up the documentation with where the prototype is at.
